

Environmental Policy Statement

BLACKWOOD PLANT HIRE LTD. is committed to reduce the amount of emissions to air and also reduce waste to landfill. The company is committed to a programme of continual improvement and to best practicable environmental practice in all significant aspects of its activities, and specifically to the prevention of pollution and protecting the environment.

It is our intention to measure our waste levels and for subsequent years put measures in place meet these commitments. We will also look at ways to reduce carbon, energy usage and greenhouse gas emissions.

Continual improvement in environmental performance is central to the environmental philosophy of the Company as is compliance with our UKAS certificated EN ISO14001:2015 management system, environmental standards, and legislative/regulatory requirements at both national and local levels.

A series of objectives and targets to minimise environmental impacts will be established and reviewed at management review meetings, the results of which will be communicated to interested parties as appropriate.

Consideration will be given to minimising the environmental impact in regard to a life cycle perspective for the purchase, utilisation, maintenance, and end of life disposal of plant, equipment and physical assets whether owned or operated by Blackwood Plant Hire Ltd. An appropriate management programme ensures that all practicable steps are taken to realise these objectives and targets.

Any Environmental Aspects and Impacts, which are evaluated, as being significant are recorded on our Aspects/Impacts Register held at head office. BPH Environmental Aspects and Impacts will be subject to review annually or in the event of an environmental event occurring or being made known to us.

We will provide suitable and sufficient environmental training to our staff and employees in order that the aspects listed above are able to be dealt with locally and before they have a negative impact on the environment. We will seek to maintain a positive environmentally aware culture throughout the organisation.

The communication of information is available, via the policy, to staff, supply chain, customers, and other stakeholders. Communication activities extend to making this policy statement and performance details with reference to objectives and targets, publicly available on request.

This policy statement will be regularly reviewed and updated, as necessary. The management endorses this policy statement and is fully committed to its implementation.
